

- LED chain for highlighting lines and edges and for backlighting complex contours, letters and symbols in signage applications
- Optimised for use in signage (lettering, surface backlighting)
- High color consistency (MacAdam 5)
- Beam characteristic: 155°
- LED module with plastic casing and strain relief with IP68 protection
- Integrated current source to stabilise luminous flux
- Flexible chain, can be split between any module
- Mounting with screw or premounted double-sided adhesive tape possible
- Nominal life-time up to 50,000 hours (at Ta 60° C)

<sup>1</sup> If the max temperature limits are exceeded, the life of the module will be greatly reduced or the module maybe damaged. For the precise position of the Tc point see the above diagram.

<sup>2</sup> Tolerance range for optical and electrical data: ±15% (electrical data for red and blue: +15/-30%)

<sup>3</sup> Exceeding the max operating voltage leads to an overload on the chain. This may, in turn, result in a reduction in life-time or even in destruction. Tolerance range for the supply voltage: 12 V: +2 V / -0 V.

<sup>4</sup> Maximum submerge depth 1 m / 60 min.

<sup>5</sup> Colour temperature for information only. Valid colour see ,Coordinates and tolerances according to CIE 1931'. All values at ta = 25° C.

### STANDARDS

- EN 62031
- EN 62471

The product meets the “inbuilt LED module” classification according to EN 62031. The product passed the glow-wire test with 850 °C according to EN 62031.

#### Certificates

- UL file: E313318
- CSA file: 249699
- ENEC for light colour DL, NW, WW only

### THERMAL BEHAVIOR

Operation temperature (operation, no defects)	T <sub>a</sub>	-40 — +60° C
Storage temperature	T <sub>s</sub>	-40 — +85° C
Max. temperature Tc point	T <sub>c</sub>	-20 — +80° C

The values apply to operation at 100 % output, natural convection. If the maximum temperature limits are exceeded, the life of the module will be greatly reduced. The module can fail within a short time. The Tc point temperature of the module has to be measured in the thermally stable state and under operating conditions. Measurement setup e.g. according to IEC/EN 60598-1.

### LUMEN MAINTENANCE<sup>1</sup>

**Lumen depreciation** – the decrease in lumen output that occurs as a lamp is operated.

**L70 or L70** – shorthand for lumen depreciation to 70 % of initial lumen output indicates 70 % lumen maintenance. L50 would be lumen depreciation of 50 %.

**B50** – another aspect of LED life projection, used in conjunction with the lumen depreciation.

B50 indicates no more than 50% of a sample of LED devices would be expected to fail before a certain number of operating hours. Failure means light output drops below a target lumen maintenance level (such as L70 or L50). B10 would mean no more than 10% of the sample fails within the given time.

### MAINTENANCE NOTE

The product is maintenance free. If cleaning during application only clear water without the addition of cleaning agents should be used.
