

### Perception Pendant Installation Guide

1. Measure and mark the desired location of the suspension cables and drill holes in the ceiling for mounting.

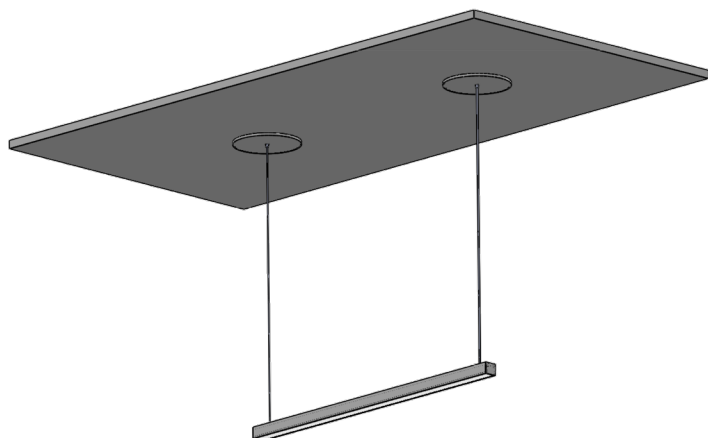

3. Mount the canopy kits to the ceiling.

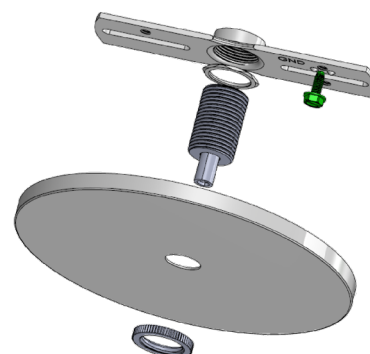

5. Pull cables through to achieve the desired suspension distance from the ceiling. Ensure an equal length for both cables to keep fixture level.

Make all necessary electrical connections between the remote driver(s) and the power feed cable(s).

2. Assemble the canopy kit above the ceiling. (For a Direct Lighting pendant, attach a remote junction box to the canopy kit above the ceiling on the side with the power feed cable. For a Direct/Indirect Lighting pendant, attach a remote junction box to both canopies above the ceiling to account for separate power feed cables.)

• IF YOUR PENDANT has an **ASYMMETRIC LENS** be sure to check which canopy will feed the power supply to properly orient your fixture.

4. **BE SURE** the weight of the fixture is supported. Then feed the suspension cable and power feed cable (or both power feed cables) through the couplers on each canopy.
