

Perception Plus Wall Mount Installation Guide

1. Align the keyhole slots on the Perception Plus wall mounted fixture with the wall surface. Mark and drill pilot holes every 21.65 in. (550 mm) to match the keyholes on the fixture.

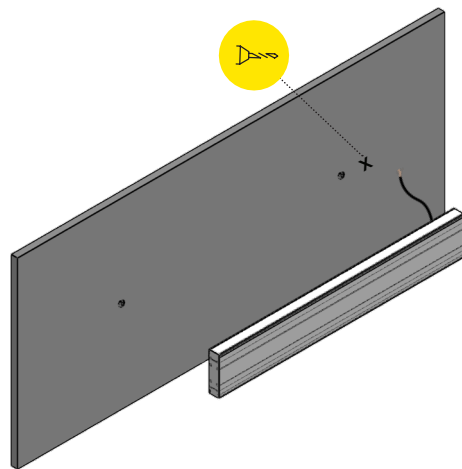

2. (a) **CHECK** that head of screws you are using is small enough to fit into the keyhole slot on the fixture. (b) Then, using anchors or other necessary mounting hardware, install screws in the pilot holes. (c) **BE SURE** to leave the head and a slight portion of the body of the screw protruding from the wall.

3. Drill a hole in the wall at the desired location for input power feed cables.

Prepare remote drivers and make any necessary electrical connections between the fixture and remote junction boxes through the recess. Be sure that power input cables **ARE NOT** supporting the weight of the fixture before completing installation.

4. (a) Set the fixture up to the wall and align keyhole slots with the mounted screws. (b) Slide the keyhole slots over the screws and set the fixture in place. Installation complete.
